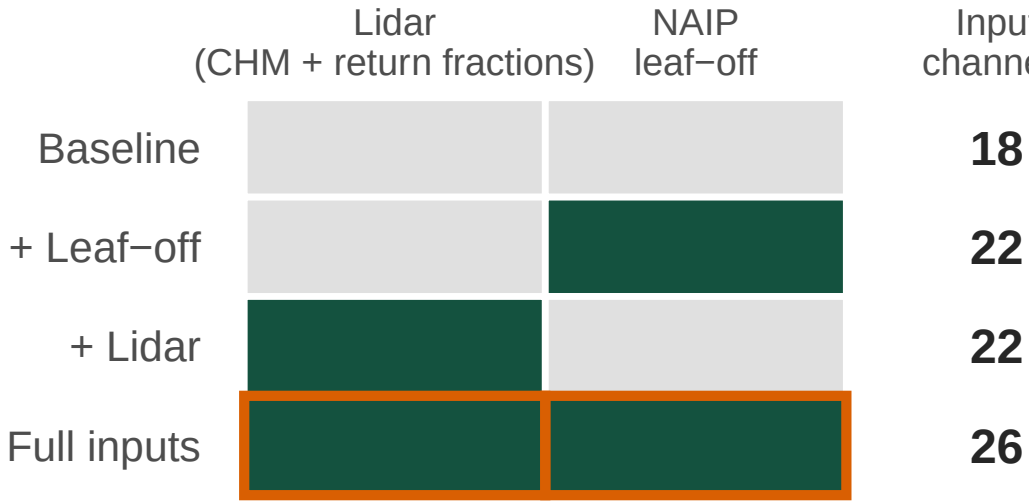
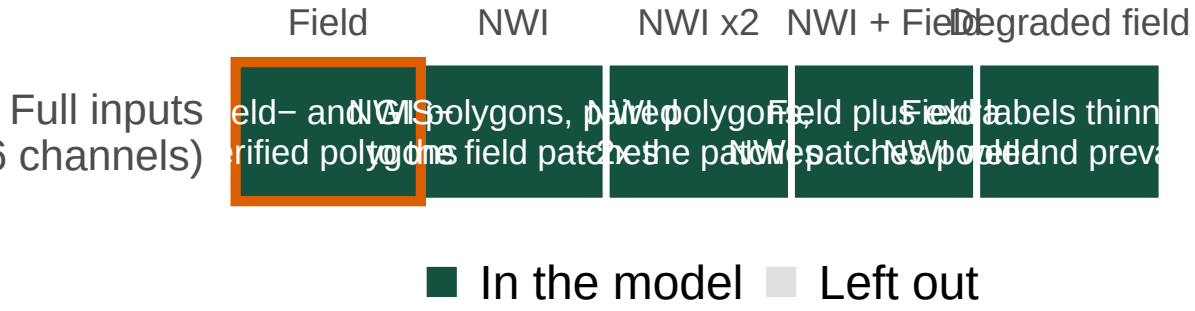
Factorial design: 8 model configuration

Every model includes terrain, geomorphon and leaf−on NAIP, and is traine
Every model is evaluated against field−verified labels, whatever it trained

A · Field labels held constant − do lidar and leaf−off imag



B · Full input set held constant − which training labels?



Orange = the reference model (field labels + lidar + leaf−off): the one model both tabl
starting point for the follow−on studies − patch−count curve (Q6) and UNet3+ (Q7).
